

Prestel CS-CMA2X2

RJ45 Conference Mic Adapter

SPECIFICATION

1、 Product profile

1.1Product picture

2、 Product specifications and parameters

2.1 Functional parameter

digital conference microphone extender:

The digital conference microphone extender is an expansion device designed for digital conference systems, aiming to enhance the flexibility and scalability of conference systems. By connecting multiple conference microphones, the extender can support larger-scale conference needs and ensure high quality and efficiency of communication between conference microphones.

1. Unit interface: 2-way unit interface, supporting the connection of 2 digital conference microphones;
2. LINK cascade port: 2-way LINK cascade port, supporting cascade expansion between devices, achieving coverage of ultra-large-scale conferences;
3. Intelligent management: With intelligent identification and configuration functions, it automatically detects the type and status of the connected conference microphone, and simplifies the system setting and maintenance process;
4. Interface type: standard RJ45 interface, easy to connect and deploy quickly;
5. Installation and maintenance: supports wall-mounted installation or under-table placement, compact design, easy maintenance and upgrade. ;
